

THE CONVEYOR EQUIPMENT SPECIALIST'S *Monorail System*

Pipe and rail assembly is strong and robust, yet light enough to be installed and retrieved with little effort. Pipe and rails are standard in various straight lengths and bends, and are available in the following finishes: galvanised, zinc, or painted.

The six wheel trolley is a proven method of conveying a variety of products along the pipe and rail assembly. The low friction bearings allow heavy items to be conveyed with ease (eg: drums, bags, cartons).

The clamps (designed for the under-ground mining industry) carry/store services behind continuous miners increasing safety & production and reducing maintenance costs.

All items are manufactured to high standards, and can be built to suit your specific needs.

The cable/hose installation for under-ground mining has the flexibility to follow passages at any angle.

For more information contact your local distributor.
